

Advanced Class Project: the MAGNOLIA LAMP

The Magnolia lamp is a perfect design for advanced stained glass students to make. It consists of 180 pieces that are not too small and are easy to cut.

It introduces students to building a compounded curved lamp on a mold.. Once students have mastered this technique they can go on to make any Tiffany reproduction shade.

Color Choices make each lamp unique.

Standard style bases are available for purchase or also can be found online.

More than one student has found some unique lamp bases at second hand or antique stores to complete their unique art work.
